About

2/3

of internet users **can't** identify phishing websites or emails

Breaches due to password security account for

80%

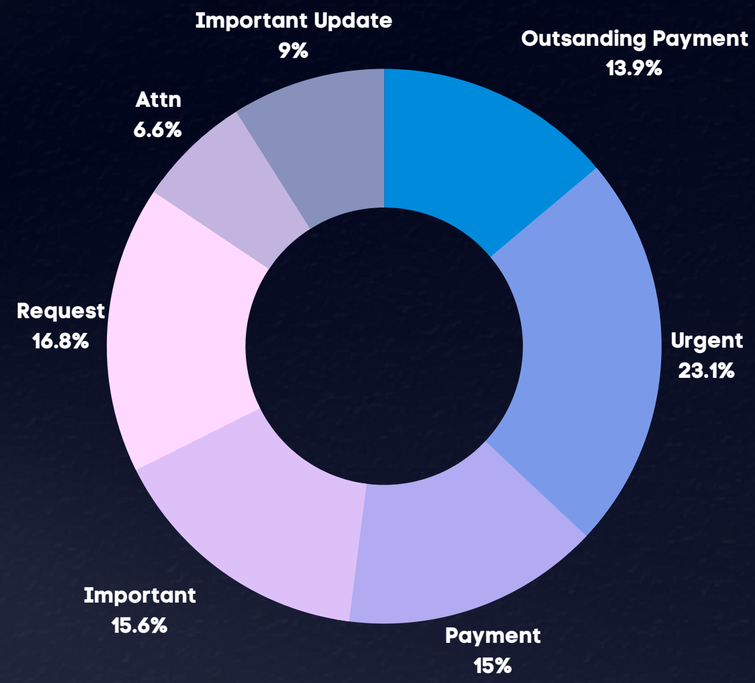
of total breaches

Companies lose

47%

more money from a data breach than those who keep software updated

Phishing Stats...

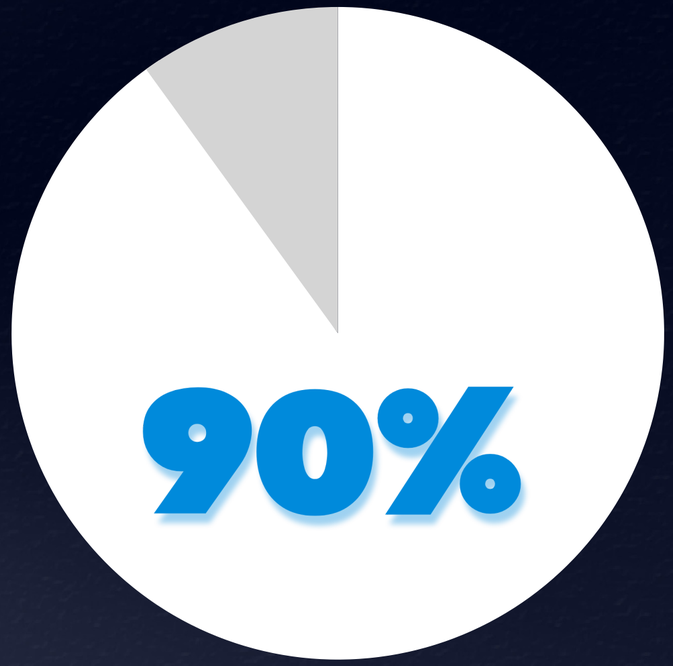


Most Common Words
Used in Phishing Emails

2/3

About 2/3 of internet users **can't** identify phishing websites/emails

MFA Stats...



90% of users feel their passwords are vulnerable to attack

Breaches due to password security account for

80%

of total breaches

Upkeep Stats...

Companies lose 47% more money from a data breach than those who keep software updated

Take-aways.

Phishing - stay armed with email protection built in

MFA - Utilizing Multi Factor Authentication and password keepers is that extra step you **need** to take in keeping your data secure

Soft/Hardware Updates - operating systems and hardware are vulnerable when they are not kept up with or updated regularly
